ASTM D3121-06
Standard Test Method for Tack of Pressure-Sensitive Adhesives by Rolling Ball
1.1 This test method covers measurement of the comparative tack of pressure-sensitive adhesives by a rolling ball and is most appropriate for low-tack adhesives. This test method is only one of several available for the measurement of tack.
1.1.1 This test method is not recommended for the specification of end use products.
1.2 Values stated in either SI or inch-pound units are to be regarded separately as standard. The values stated in each system may not be exact equivalents, therefore, each system must be used independently without combining values in any way.
