Model No. ASTM.D0790.10 - Three and Four Point Loading Flexure Fixture Up to 12" Spans and 2" Wide

The supports can handle pin diameter sizes from 0.25" to 0.5". The fixture is supplied with (0.125" radius) 0.25" diameter pins which are held in an alignment groove with O-rings. The center positions of the loading pins are scribed in the pin support which runs along a center finding scale on the loading rails.

Model No. ASTM.D6272.10 - Three and Four Point Flexure Fixture Up To 12" Spans and 2" Wide

The supports are supplied with 5mm radius (10mm diameter) pins which are held in an alignment groove with O-rings. The center positions of the loading pins are scribed in the pin anvil which runs along a center finding scale on the loading rail.

All Fixture Information

Support Base - 12" (304.8mm) long by 2" (50.4mm) wide with a T-slot running the length of the base. The upper and lower surfaces are ground flat and parallel. The support block separation is measured along a center finding scale located on the front surface of the support base.

Specimen Supports - Specimen support spans continuously adjustable from 1/2" (12.7mm) up to 12" (304.8mm). 2" wide by 3" tall with alignment rails which fit in the T-slotted support base. The center position of the loading pin is indicated by a scribe line which runs down the side of the support to the center finding scale. The supports are free to slide anywhere along the support base and may be reversed for short and long spans.

The fixture comes with a 12mm male clevis for upper mounting and a 5/8"-18 threaded coupling for lower mounting to your testing machine. The fixture can handle 8,000 lbs capacity and is assembled 3" x 13" x 9". The fixture is constructed from stainless steel and is manufactured in compliance with ASTM D229, D790 and D6272.
